

Cat and Mouse

In this game, the cat always starts in square A1, and the cat always goes first, but the mouse can choose which square to start in.

For each possible starting square for the mouse:

- If you're **confident** that you will win if **you are the cat** and the mouse starts in that square, write a "C".
- If you're **confident** that you will win if **you are the mouse** and the mouse starts in that square, write an "M".

Cat and Mouse

What if the mouse goes first instead of the cat? (The cat still starts in square A1, but now the mouse goes first.)

For each possible starting square for the mouse:

- If you're **confident** that you will win if **you are the cat** and the mouse starts in that square, write a "C".
- If you're **confident** that you will win if **you are the mouse** and the mouse starts in that square, write an "M".
