

Try to find all the different ways you can make each size hexagon using copies of one type of block.

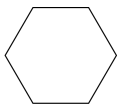

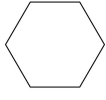

In each box, write the number of copies of the type of block you're using that you need in order to make the shape you're making, or write an X if it's not possible.

Don't actually try making this one, just write your predictions!

Try to find all the different ways you can make each size rhombus using copies of one type of block.

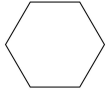

In each box, write the **number of copies** of the **type of block you're using** that you need in order to make the **shape you're making**, or write an **X** if it's not possible.
